

# Cargo Proa Prototype

## Building Blog

### MARCH 2021#1

From Rassy: Uni has commenced and the shed has fallen quiet – Sorta! – That is apart from Rob and I pushing to get the beams completed ASAP. Some of the volunteers have dropped in for a few hours here and there over the last fortnight but mostly it's just been the two of us. With plenty of shed space and not many distractions, work is getting done, just not on as many jobs as before. On Friday with the help of one of our competent volunteers we completed the last of the beam infusions. Next week should see construction of the beams done and dusted, and the hull insertion boxes fitted. Rob is already thinking and talking about the LW hull mid section build which apart from the masts and rig is the last major piece of the cargo proa puzzle.
